

WELCOME

Judge Meeting – Online

10. January 2026

IGP is not only a program for
dogsport

IGP first is a program to
select dogs for breeding!

Priorities in dog breeding

Health

Temper

Beauty

Dog owner requirements

1. A healthy dog!
2. A dog with strong character and nerves, which has no problems with the environment and causes no problems in the environment!
3. Beauty is in the eye of the beholder. Of course, a dog should correspond to the breed standard, whereby overttyping is to be rejected in every respect!

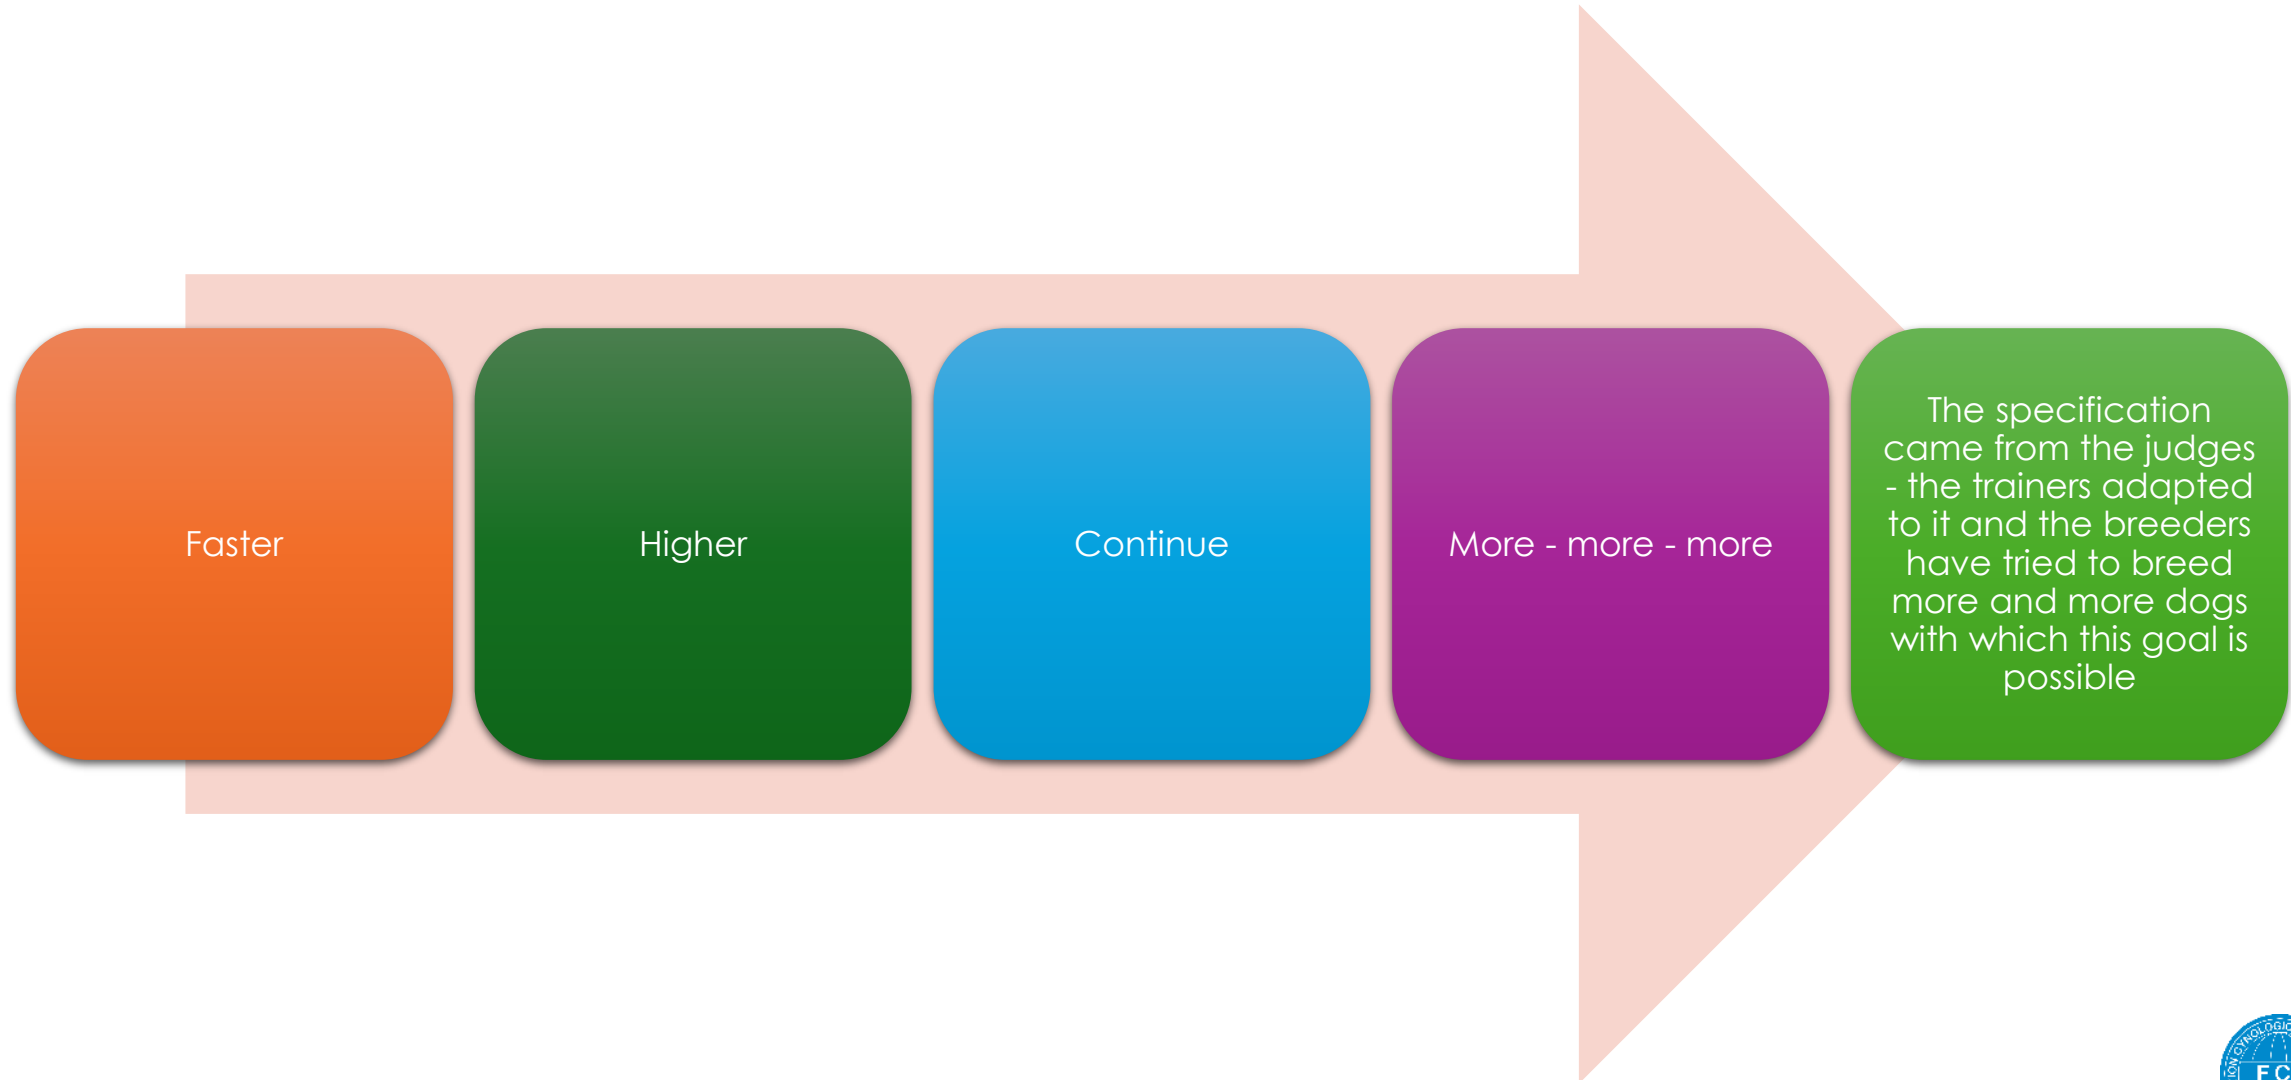

The purpose of pedigree dog breeding

To at least maintain or, if possible, to improve the breeding stock characteristics.

Development in recent decades

What is the goal of many breeders?

- ▶ To breed dogs that possible high ratings at exhibitions

or

- ▶ To breed dogs that are able to achieve high ratings at performance events.

What has been achieved?

- ▶ Health problems in several breeds - no standard gives to breed dogs that are not healthy!
- ▶ There are more and more dogs - in many working dog breeds - who have a very low threshold of irritation, a bad nervous condition and are no longer durable for “normal owners”.
- ▶ The purpose of a test is to select dogs for breeding.

Responsibility of the judges

Both show and performance judge bear a great responsibility for the development of the breeds!

What can we judge?

- ▶ Only the phenotype!
- ▶ It is almost impossible to judge why a dog behaves this way during an event.
- ▶ It is also irrelevant for the assessment - only a self-confident, strong-natured dog deserves a maximum rating!
- ▶ Dogs with significant restrictions may not find entry into the breeding.

Stimulus - stimulus threshold

- ▶ Trigger of an aggression behavior is always a stimulus.
- ▶ Low threshold - choleric - undesirable
- ▶ Medium threshold - Sanguine - desired
- ▶ High threshold - phlegmatic - undesirable

Stress means pressure, strain

- ▶ Stress primarily has the evolutionary function of increasing the attention and tension of the organism by releasing stress hormones in order to react quickly in dangerous situations.
- ▶ Stress is therefore originally a natural positive reaction of the body.

Stress

- ▶ Stress is not fundamentally negative.
- ▶ Stress increases responsiveness through accelerated breathing, increased heart rate, dilation of the pupils, better supply of the muscles, rise in blood sugar, tension, changed posture and facial expressions
- ▶ Stress is positive if a solution is found or a solution (positive experience) can be used.

Expressive behaviour

- ▶ Expression is what the dog expresses from the inside out

Beginning and end of the test

- ▶ The examination begins with the submission of the performance booklet, and it ends with the return of the performance booklet.
- ▶ The award ceremony is still part of the examination and still counts as an assessment of social compatibility.
- ▶ Dogs who are disqualified due to unwanted aggression behavior must repeat the BH-VT and complete it positively before the next start.

Termination of the exams

- ▶ Due to illness or injury can also be done against the will of the dog handler, if the dog cannot meet the requirements of the examination regulations in the opinion of the performance judge.
- ▶ If a dog handler cancels the examination without presenting a certificate or against the opinion of the performance judge that the dog is sick, the entry in the performance booklet is deficient "due to termination of the dog handler".

Evaluation

- ▶ The evaluation is based on grades - from which the points are derived.
- ▶ "Point judging" is to be rejected - this makes the performance judge a "fault judge" and not a performance judge. We don't pull off points – we give points!

Entry for World-Championship Tracking

- In the specifications we have: FCI I-FH (2 tracks)
- Many nations cannot offer this test and would therefore have to hold it in other countries.
- Decision: Prerequisite for participation in the World Championship: FCI-FH 3

Judges for FCI-IGP World Championship

- Supervisor A
Serbia Nenad Milojevic
- Judge: Robert Fagos CZ
- Supervisor B/C
SK Igor Lengvarsky
- Judge B: Lene Carlson DK
- Judge C: Robert Markschräger A

Judges Tracking World Championship

- Supervisor Klaus-Jürgen Glüh D
- Judge: Aivo Oblikas Estonia
- Judge: Saso Cvek SLO

Meeting with WUSV, FMBB, ISPU, ATIBOX

- Invited also: Dobermann, Rottweiler
- Hari Arcon, Clemente Crosso, Robert Markschläger, Josef Vornarburg, Edgar Scherkl, David Huber, Michael Heimbs, Juan Carlos Garcia Gonzalez
- A very pleasant, collegial atmosphere!
- Agreement was reached regarding minor adjustments to the regulations.
- Joint continuing education for judges - specialized training for international championships.
- Distinguishing between trials and competitions.
- Ethics agreements for judges

FCI FH 1

- The resting time is 90 minutes.
- Due to organizational reasons, this causes problems during club examinations.
- The resting time is reduced to 60 minutes.

Retrieve on flat

- Instead of marking a square, only a minimum distance of 8 m and a maximum distance of 12 m are marked.
- The side lines are omitted, and the angle at which the dumble lies is irrelevant.
- If the dumble lies too short or too far, it is placed at the line (nearest point from where it was thrown).

Retrieve over the hurdle

- The rectangle over the hurdle and the A-frame should be widened by 50 cm left and right.
- The minimum distance to the hurdle should be reduced to 4 meters.
- If the dumble does not land in the designated square, it will no longer be placed in the center, but rather at the line (where the dumble is closest, or where it fell out).

Retriev over the Scalling Wall

- In FCI IGP 3, the minimum distance should be reduced to 4 meters – measured from the center of the obstacle
- This is intended to encourage the dogs to perform a climbing jump rather than simply running over the obstacle at high speed.

Questions PO

Disqualification for Aggression

- It is clear that the BH-VT only needs to be repeated in the event of disqualification due to aggression.
- Entry in the score book: "Disqualification due to temperament issue - BH-VT retake"

- Question about arm positioning in the basic position; our current translation says "relaxed against the body," which may seem inconsistent. Would it be possible to send clarification with an illustration of how the guide's arms should be positioned in this way? (An illustration similar to the one with the dog and the articles)
- Where must the dog maintain focus during heeling? Is focusing on the armpit penalized? If so, what is the penalty? Is it assumed that the same applies to all developments? How much should be deducted if the other parameters are adequate? Attentive, focused, harmonious, and well-positioned.

- The current regulations, state regarding free following without a leash, that only a single "heeling" command can be given at the start of the exercise, eliminating the possibility of two commands at the beginning of each change of pace or not?
- Other questions:
- We request if the possibility of evaluating whether those disqualified for not releasing should be penalized for termination, just as was done in tracking with the loss of control, thus allowing people who travel to a championship to participate, or maintaining the qualifications of the other disciplines.

- 1. What was the reason for including the rule prohibiting belly bags and so-called training aprons?
- It is a help!

- 2. A more important question concerns the ratio of qualitative assessments to points. The table indicates that an excellent score begins at 96% of the final score. However, the lowest limit is 286, which is 95.3%. For an excellent score to begin at 96%, its lower limit must be 288 points. What is more important—points or percentages? This is because our athletes can earn athletic titles and ranks, but there must be an exact correspondence between points and qualitative assessments.

- 1. FCI World Championship – Ball IssueThree members of the expert commission were present at the FCI World Championship. It was noticed that several dogs carried balls during the awards ceremony. Since there was no reaction to this, the question arises as to how a uniform regulation or clear policy from the expert commission can be maintained.
- **In the future, we intend to ask dog handlers to refrain from this practice. It's a difficult problem. There's no qualification requirement for it. Furthermore, a microchip check would need to be carried out to ensure that the correct dog is participating.**
